

PROFESSIONAL EXPERIENCE

Software Engineer with

Full Stack Developer

- Oversaw the design, building, and implementation of large to medium scale software projects; ranging from SAAS accounting portals to custom reporting platforms.
- Design and implemented a “white-labeling” feature across three different projects, decreasing deployment time by 85% for new clients.
- Reduced time to production for new features by 50% by creating PHP scripts and build templates to automate our MVC development.
- Daily responsibilities included designing and implementing full pages and features, updating database queries using MySQL and PDO, creating specifications for tasks and assigning tickets, writing technical documentation.

Programming & Operations at

Internship

- Tested and improved a RubyOnRails web app with GDPR compliance, that served as the credentialing service for the Executive Office along with large national sports leagues; containing over 500,000 records.
- Designed and helped implement a new UI for a mobile application as well as improving the UI on our existing web application.
- Showed the ability to learn and adapt to new technology quickly, assisted existing clients with technical issues, and was able to convey how the new technology works to potential clients.

Tech Consultant / Business Development Consultant at

Consultant

- Prepared and managed start-up company’s computers, databases, and software systems for data handling.
- Created JavaScript and Python programs to increase efficiency of web-related activities and data handling, such as the automation of data input into a wholesale website.
- Managed direct email communication with clients, as well as email marketing campaigns to over 100,000 company contacts.
